

Palauan Name: Kmekumer

Scientific Name: *Parkia parvifoliola*

Family Name: Fabaceae

Kmekumer is a rare endemic species of Palau occurring mainly in Ngaremlengui. It is currently found in the forest vegetation along the trail to the Ngaremlengui waterfall along the Ngermeskang River.

A single tree was recently found in Ngiwal in the upper Ngerbekuu watershed and another in Ngchesar. This is a medium size tree that grows to about 15 m in height and one tree that was measured had a diameter of 19 cm.
