

Palauan Name: Uduid

Scientific Name: *Manilkara udoido*

Family Name: Sapotaceae

Uduid is found only in Palau and is abundant only in the forests of Southern Babeldaob. It can be distinguished by the very notable flowers that hang down like falling stars. This is a small tree that grows to about 5 m in height with a 2 to 6 stemmed trunk 10 to 77 cm in diameter. The wood is used for building and fruit bats drink the nectar of the flowers.
